+skill('creativity', '98%', '(creative thinking about design and coding)')
+skill('learning', '93%', '(I would describe myself as fast learner)')
```

The Complete Skills Blueprint

1. Programming Fundamentals

Goal: Build strong logic, understand how code works, and develop problem-solving habits.

Skill Area	What to Learn	Resources
Language Basics	Loops, Arrays, Strings, Functions, Recursion	YouTube – <i>Apna College C++ Playlist</i> , <i>CodeWithHarry</i>
OOPs Concepts	Classes, Inheritance, Polymorphism, Encapsulation, Abstraction	GFG OOPs Notes, Apna College & CodeHelp OOPs one shot
Practice	100 Beginner Problems	<i>HackerRank "C++"</i> & <i>Codechef Beginner Track</i>
Bonus Tip	Focus on logic > syntax. Write dry runs on paper.	

2. Data Structures & Algorithms

Goal: Master problem-solving patterns that companies ask every year.

Topic	Focus Area	Resource
Arrays & Strings	Sliding window, Two pointers	<i>Striver's A-Z Sheet</i> , LeetCode
Linked List, Stack, Queue	Implementation + Problems	GFG, <i>Striver's A-Z Sheet</i>
Trees, Graphs	Traversals, BFS/DFS, Shortest Path	<i>NeetCode YouTube</i>
Recursion + DP	Subset, Knapsack, LCS	Aditya Verma Playlist
Sorting & Searching	Binary Search patterns	LeetCode Explore, <i>Striver's A-Z Sheet</i>
Practice Routine	1 question/day consistently	Track on Notion or Google Sheet

 *Tip:* Don't rush. Solve 300+ problems over time -it compounds.

3. Web Development & Real Projects

Goal: Create practical projects that show your creativity and real-world thinking.

Area	Tools/Tech	Project Ideas
Frontend	HTML, CSS, JS, React.js	Portfolio, Expense Tracker, Blog Site
Backend	Node.js, Express.js, MongoDB/MySQL	Social Media App, PG Rent System
Version Control	Git & GitHub	Upload all your projects, write README
UI/Design	Canva, Figma	Learn to make interfaces user-friendly

 *Tip:* Add a "Live Demo" + "GitHub Link" in your resume.

4. Computer Science Core Subjects

Goal: Be ready for interview questions beyond coding.

Subject	Must-Know Topics	Resource
OS	Process, Deadlock, Scheduling	Jenny's Lectures, GFG, Neso Academy
DBMS	Normalization, Joins, Transactions	KnowledgeGate, Neso Academy
OOPs	4 Pillars, Real-world examples	Striver's Notes, GFG, Neso Academy
CN	Layers, IP, TCP, Routing	Gate Smashers, Neso Academy

💡 *Shortcut:* Revise through professors' **official PPTs** before interviews -80% questions come from there.

5. Hackathons, Internships & Freelancing

Goal: Apply your skills, network, and gain real-world confidence.

Platform	Why Join	What You Gain
Unstop / Devpost	Hackathons & challenges	Collaboration, teamwork, pressure handling
LinkedIn / Indeed / Internshala	Internships	Real company exposure
Fiverr / Upwork / Freelancer	Freelancing	Earn while learning, build portfolio

💡 *Pro Tip:* Start with small gigs -even ₹500 ones build your profile.

6. Communication, Resume & Personal Branding

Goal: Learn to express your skills confidently.

Area	What to Do	Resource
Communication	Explain solutions aloud, record yourself	<i>English Speeches, TED Talks, SpeakBuddy app</i>
Resume	1-page, impact-based	Use my template (comment RESUME if you want it)
LinkedIn	Optimize headline, about, projects	See my Day 16 post
Portfolio	One-page site showing your work	GitHub Pages, Netlify, or Wix

💡 *Pro Tip:* Speak about your projects like stories - "I built this because..." instead of "I used React and Node."

7. Daily & Weekly Routine

Goal: Stay consistent without burnout.

Routine	Description
🧠 Daily	Solve 1 DSA problem, learn 1 new concept
💻 Weekly	Work on your project or learn a new tool
🎯 Monthly	Update LinkedIn + Resume with progress
🔥 Bonus	Attend 1 hackathon or challenge every 2 months

8. Extra Resources (Free & Must-Save)

Category	Links
DSA Practice	LeetCode, GFG, CodeStudio
System Design (Basics)	Tech Dummies, Anuj Bhaiya
Interview Prep	InterviewBit, Pramp (mock interviews)
Resume Tools	FlowCV, Reactive Resume
Project Hosting	Render, Netlify, GitHub Pages

Final Advice

- Don't compare your speed with others -consistency wins.
- Document your journey on LinkedIn; opportunities find you.
- The more *impact-based* your projects, the faster you'll stand out.

Follow this roadmap and you'll move from "PCMB student" → "Software Engineer" faster than you think 💪

Keep growing, keep building 🚀
